Bilibili: 彭正皓

Github: [pengzhenghao](#)

Email: pengzh@ie.cuhk.edu.hk

EDUCATION

The Chinese University of Hong Kong

August 2019 - Present

- PhD student under the supervision of [Prof. Zhou Bolei](#) at Multimedia Lab, Department of Information Engineering.

Shenzhen Institutes of Advanced Technology (SIAT), Chinese Academy of Sciences

June 2018 - Sept. 2018

- Research intern at Multimedia Research Center, under the supervision of [Prof. Qiao Yu](#).

University of California, Berkeley

July 2017 - Aug. 2017

- Summer session.

Shanghai Jiao Tong University

Sept. 2015 - July 2019

- B.E. in Naval Architecture and Ocean Engineering.
- Member of Zhiyuan Honors Program.
- Research assistant at Advanced Computer Architecture Laboratory with [Prof. Jiang Li](#).

RESEARCH PAPERS

[1] **Zhenghao Peng**^{*}, Quanyi Li^{*}, Chunxiao Liu, and Bolei Zhou. Safe driving via expert guided policy optimization. *Submitted to CoRL 2021*

RESEARCH EXPERIENCES

Safe Reinforcement Learning System via Expert in the Loop [1]

March 2021 - June 2021

Supervised by [Prof. Zhou Bolei](#)

- Proposed an Expert Guided Policy Optimization (EGPO) framework for safe RL, which incorporates the guardian mechanism in the interaction of agent and environment to ensure safe and efficient exploration.
- The experiments on safe driving shows EGPO can achieve training and test-time safety and better performance.

Simulating Realistic Traffic Flow via Multi-agent RL [2]

Feb. 2021 - May 2021

Supervised by Prof. Zhou Bolei

- Developed a novel MARL method called Coordinated Policy Optimization (CoPO) to incorporate social psychology principle to learn neural controller for a population of autonomous driving vehicles.
- The vehicles population learned by CoPO achieves superior performance and exhibits complex and socially compliant behaviors that improve the traffic efficiency and safety.

Autonomous Driving Simulator PGDrive [4]

July 2020 - Present

Supervised by Prof. Zhou Bolei

- Developed the **PGDrive**, an open-ended and highly customizable driving simulator based on Panda3D and Bullet.
- Utilized procedural generation to generate infinite driving scenes with different road networks and traffic flows.

Large-scale RL System Solving StarCraft II

Mar. 2020 - Aug. 2020

Research Intern at SenseTime

- Participated in architecting and developing the large-scale RL system **DI-engine**.
- Involved in the training of **StarCraft II AI**.

Efficient Asynchronous Reinforcement Learning [5]

Jan. 2020 - July 2020

Supervised by Prof. Zhou Bolei

- Proposed Ensemble Policy Optimization (EPO) framework that trains multiple heterogeneous policies simultaneously solving the same task while maintaining the diversity of the ensemble.
- EPO substantially improves sample efficiency in continuous locomotion tasks compared to the single-policy optimization counterparts.

Multi-agent Reinforcement Learning Traffic Simulation

Feb. 2019 - July 2019

Research Intern at SenseTime

- Optimized an internal traffic simulator and achieved $5\times$ speedup in simulation via Cython and code optimization.
- Applied MARL framework RLLib to train 16 autonomous driving vehicles in fuse and split scenes, pushed success rate from 80% to 99% and accelerated training for $8\times$ (previously a week, now a night).

Weakly-supervised Video Action Detection via Convex Clustering

June 2018 - Sept. 2018

Supervised by Prof. Qiao Yu

Research Intern at SIAT

- Applied RL agent as action detector in untrimmed videos based on the reward signals from the snippet-level action classifier.

Approximate Random Dropout [8]

Apr. 2018 - Sept. 2018

Supervised by Prof. Jiang Li

- Replaced the random dropout in neural network training with predefined dropout patterns, enabling skips of the redundant zero-multiplication and thus speedup. The method reduced the training time by 20%-77% (dropout rate is 0.3-0.7) on MLP and LSTM with low accuracy drop.
- I provided proof on the equivalence of this approach and the random dropout and polished the paper.

Neural Network Based Approximate Computing Framework [9]

Sept. 2017 - May 2018

Supervised by Prof. Jiang Li

- Fused the conventional approximate computing architecture as an end-to-end structure. Applied the Hadamard product at the output of predictor and the activation of approximator to learn jointly.
- Reduced 74% training time; Improved the invocation by 50.6%, averagely. In JPEG benchmark, 60% parameters are reduced and $32\times$ speedup are achieved.

Handwritten Arithmetic Expression Recognition

May 2017 - June 2017

Course Project

- Expanded MNIST dataset with 10000+ operators images and built an End-to-End system providing recognition and calculation service of handwritten arithmetic expression via WeChat.

MISCELLANEOUS

Programming Languages: Python, Matlab, HTML, CSS, C++, etc.

ML Frameworks: Ray, RLLib, TensorFlow, PyTorch, Keras, etc.

Skills: Git, L^AT_EX, PyCharm, Keynote, Photoshop, Final Cut, Cantonese, etc.

Hobbies: Genshin Impact (原神), Billiards, Badminton, Film Criticism, Science Fiction, Photography, Jogging
